

Mavic – Sram XX1 Compatibility

August 2012

Tech Details

Sram XX1 is a new standard of MTB gearing

It uses an 11 speeds cassette with a range of cogs from 10 to 42t

It requires a **specific driver body** that is compatible with current wheel spacing (also specific axle nuts)

Mavic has **signed a licence agreement** with Sram to use the XX1 driver body standard

Prototypes have already been ridden by Mavic/Sram athletes (Clementz, Fontana, Fumic, Absalon)

- Mavic will offer an aftermarket kit with XX1 compatible driver body and axle nuts
- Compatible with 2nd generation ITS-4 and new TS-2 wheels
- Availability target is early 2013
- Pricing, precise release date and parts number will be communicated later
